Booklets: Beginners Guide to Dyeing Cotton Introduction to theory, Methods for Hot and for Cold Dyeing. Microwave dyeing. Dye usage charts. (Books about dyeing Wool &Silk also avail)	\$2
Cotton Base Solution Contains Urea, Soda Ash and Leonil. Used to presoak cotton when using cold dyeing method.	500ml - \$6 1L - \$10 2L - \$17 4L - \$25
Wool & Silk Base Solution Contains detergent, acetic acid and urea. Used to presoak animal fibre when using cold dyeing method.	
Glaubers Salts (Sodium Sulphate) Slows down fixation of dye onto wool to assist in the development of an even colour (Also used to improve dye solubility and force dye out and into cotton fabric)	200g=\$4 500g=\$6 1kg=\$10
Soda Ash (Sodium Carbonate) Fixes dye onto cotton fabric by raising the pH above 7	
Urea Swells fibre to assist dye penetration when cold dyeing	
30% Acetic Acid Fixes dye onto wool and other animal fibres by reducing pH below 7. NB Freightng Acid can be expensive. We have some depots around the country that hold stock. We'd welcome more.	250ml=\$5 500ml=\$8 1lt =\$13
Lyogen MF Slows down fixation of <i>Acid Dyes for Wools and Silks</i> (formerly called Sandolans) to assist in the development of an even colour	100ml=\$5 250ml=\$10
Lyogen FN Slows down fixation of <i>Fibre Reactive Dyes for Wools and Silks</i> (formerly called Drimalans) to assist in the development of an even colour	100ml=\$5 250ml=\$10
Leonil KS-C Assists wetting of fibre or fabric for cold dye applications. (replaces our previous product - Irgapadol P)	100ml=\$5 250ml=\$10
Imerol XND Used for scouring fibre and fabric before dyeing and for washing out unfixed dye after dyeing	100ml=\$5 250ml=\$10

Teri  **Dyes**

For more information please visit www.teri-dyes.co.nz

RETAIL PRICE LIST for COTTONS, LINEN and TENCEL.

Teri Dyes sells dyes throughout NZ, mostly by mail order, to those who work with cottons and other cellulosic fibres. We also sell dyes for wools, silks and for harakeke/flax. Teri Dyes sells a guide booklet introducing Cotton Dyeing, also booklets for dyeing wools and silk.

Teri Dyes stocks a wide range of shades, and can mix or match almost any other. The 25g pottles will dye about 1-2 kilo of fibre in most shades, though the darker the colour the more dye is needed. We also sell dyes in 50g, 100g, 200g pots and 500g and 1Kg jars.

Teri Dyes for cotton

The two ranges of cotton dyes, the Drimarenes and the Procions illustrated on the inside page can be used interchangeably. The colours shown are illustrations, not guarantees. Both the Drimarene and Procion Dyes ranges are fixed in an alkaline environment, normally by adding SODA ASH to the dye solution. *Common Salt*, sodium chloride, *is not ordinarily used* with Drimarene or Procion cotton dyes.

Use a **Hot Dye process** if you want to change the colour uniformly from A to B. Use a **Cold Dye Process** e.g. by presoaking in Base Solution, then allowing to heat over time – if you want to get gradations, bleeds or other artistic effect. Most people use Glaubers Salts or Urea to enhance the penetration of the dye.

The final colour you get when dyeing will depend on (i) the amount of dye used (ii) the nature of the fibre you start with – cleanness, lustre, blend, basic colour shade and variations to it and importantly (iii) the temperature of any dye solution used and the time allowed for the uptake of the dye – and the evenness of that temperature. There are no failures in dyeing – just, sometimes, unexpected results! Learn from them. **Dyeing cotton can be very easy.**
