READY TO USE FLAX DYES DYEING METHOD

Place the flax or raffia to be dyed in a suitable sized container and cover with hot water.

Add the required amount of liquid dye.

Heat to boiling and hold just below the boil until the required depth of colour has developed.

Remove the dyed flax and wash thoroughly to remove any unfixed dye.

AMOUNT OF DYE TO USE

For *most colours* for **each gram** of dry flax, use **half a ml** of the dye solution as supplied.

For *dark colours* for **each gram** of dry flax, use **one ml** of the dye solution as supplied

For *black* for **each gram** of dry flax, use **two ml** of the dye solution as supplied

NB If there is still dye left in the dye pot at the end of your dyeing you can reuse the dye liquid. The colour you get will not be as intense as the original dyeing and may also differ somewhat in shade.

Every care has been taken with the above recommendations, however they must be tested and adapted to suit your own requirements and dyeing conditions.
